Emma Holly of Restore Scar Therapy Recommends DEEP OSCILLATION® Therapy

"As a leading global educator on scar therapy, and for my private clinic in London's medical centre - Harley Street - I always want to select safe, effective ways to support my clients through recovery and to improve their quality of life after a traumatic injury or surgery. One therapy device I have found truly transformative is DEEP OSCILLATION®, which I use regularly for scar recovery and chronic pain conditions.

This gentle, non-invasive treatment uses low-frequency electrostatic impulses to create deep vibrations in the tissue. Unlike other forms of mechanical therapy, it works through the skin without pressure, making it especially beneficial when working with sensitive, post-surgical, or painful areas. As I am able to deliver treatment directly using gloved hands for the application, I can continue to have feedback on the tissue quality as it changes during treatment.

Scars can feel tight, painful, and restrict mobility after surgery, and this is where DEEP OSCILLATION® makes a real difference. It helps to reduce swelling and

restrictive. Importantly, it relieves discomfort without the need for heavy pressure. Clients often tell me that alongside the physical improvements, they also feel emotionally lighter and more at ease as their scars become more comfortable.

For people living with chronic pain after surgery or trauma, and clients with fibromyalgia or long-term musculoskeletal conditions, even light touch can sometimes be overwhelming. DEEP OSCILLATION® offers a gentle alternative. Its soothing vibrations calm irritated tissue, reduce muscle tension, and allow the nervous system to settle. Many clients describe the experience as deeply relaxing, and over time this can help ease movement and bring greater comfort into daily life.

What I value most is how safe, versatile, and adaptable this therapy is. It allows me to begin working with clients earlier in their recovery, when traditional manual techniques might not yet be appropriate, while also providing ongoing relief for those managing chronic pain. For my clients, it often means faster recovery, softer and more comfortable scar tissue, reduced pain and swelling, and an overall greater sense of wellbeing.

In my practice, DEEP OSCILLATION® has become an invaluable tool. Whether supporting recovery after surgery or helping someone manage the ongoing challenges of chronic pain following injury, it consistently offers a gentle, effective, and empowering way to encourage healing."

Dr Jens Reinhold of Physiomed Elektromedizin AG, the manufacturers of DEEP OSCILLATION® wrote:

"We are honoured to receive Emma Holly's endorsement and her recognition of DEEP OSCILLATION® Therapy's transformative impact on scar recovery and chronic pain management. Her testimonial highlights the therapy's safety, versatility, and gentle efficacy, reaffirming our commitment to advancing innovative solutions that empower clinicians and enhance patient healing. Together, we are dedicated to supporting improved quality of life through gentle, effective, and innovative therapy."
